Subject: comments regarding consideration of new PURPA standards

Gentlemen (or Ladies as the case may be),

I wish to go on record as favoring the adoption by CEC of the Smart Metering and the Fossil Fuel Generation Efficiency Standards. It is my understanding that CEC is already engaged in implementing renewable technologies for energy production. While Interconnection and Net Metering seem like reasonable endeavors, they do not apply to my personal situation; hence I am neutral about your consideration of those particular standards.

James Meyers
